

H6

description

The H6 enclosure is built on the original statement of OrigenAE's design ethos and commitment to provide high quality, beautifully crafted and aesthetically pleasing HTPC enclosures. Based on the first chassis specifically crafted for use as a Home Theater PC, the Origen AE H5, the H6 has evolved to meet the demands of current users and components whilst still maintaining the perfect looks of the H5. The finely machined aluminium front and side panels to the supreme brushed anodised finish of the aluminium, every detail has been engineered for maximum effect.

The H6 raises the benchmark from which all other HTPC chassis are gauged by. You know what they say, good design never ages, and this statement certainly holds true in the case of the stylishly and elegant H6

features
