

S14V

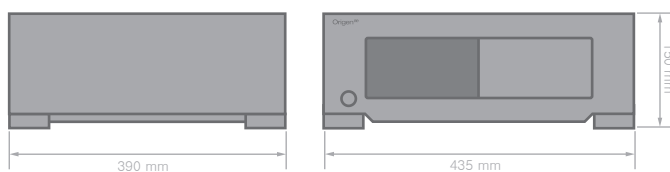

description

The S14V features the same unique one piece 5mm thick curved-edge-design used in the S21T. The S14V represents the mid-size chassis in the S-Series range. Measuring 150mm in height the S14V will support a full size PSU, MicroATX motherboard, 4 hard drives, optical drive and built in media bay. In keeping with the design philosophy of the S-Range, the optical drive, media bay and ports are hidden behind a door which features our new patented hinge-design/mechanism to ensure a smooth and refined movement.

The S14V also accommodates the use of full height expansion cards giving maximum expansion card flexibility.

As with all our S Series chassis, our new VF310 VFD module it's supplied with is extra large display area you won't find yourself straining to see what's playing from the comfort of your living room sofa.

features

- one piece 5mm aluminium front & sides
- 2 x 60mm low dB exhaust fans (pre-installed)
- 1 x 92mm low dB intake fan (pre-installed)
