

# VF110

## description

The OrigenAE VF110 solution is based on the flexible IR Trans solution. The VFD will work with both Windows and Linux operating systems. It is powered from the ATX power cable and connected via USB, so no annoying external cables. Another key feature is the ability to switch your HTPC on from a totality of state (not just sleep mode, but OFF). This coupled with full mce compatibility make this the VFD of choice.

## features

- full MCE compatibility
- linux drivers available
- fits H5, H7, X8, X10, X11
- supplied with philips mce remote
- learns any remote
- scrolling display
- displays time in standby
- switch PC on from off state
